                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   99
                                                                                                                                            Screening a human subject for increased risk of developing a lymphatic disorder, comprises assaying a nucleic acid to determine a mutation altering the sequence of a vascular endothelial growth factor receptor-3.
                                                                                                                                                                                                                                                   The present sequence is the coding sequence for the human vascular endothelial growth factor ( (VGF-C). It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (VBGFR-3, also known as Flt4 or fms-like tyrosine kinase 4) allelss they possess and thus their likelihood of developing hereditary lymphoedema. Conditions associated with lymphoedema include Milroy-Nonne syndrome, which is early onset lymphoedema and lymphoedema praecox, which is late
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CGCTGCTCCCGGGTCCTCGCGAGGCGCCCGCCGCCGCCGCCGCCTTCGAGTCCGGACTCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for screening a human subject for an increased risk of developing a lymphatic disorder e.g. hereditary lymphatedeema. The method comprises assaying nucleic acid of a human subject to determine a presence or an absence of a mutation altering the sequence or expression of vascular endothelial growth factor receptor-3 (VEGFR-3)/fme-like tyrosine kinase 4 (Flit4) allele (see AAGS952 and AB3764) and determining an increased risk of developing lymphatic disorder from presence or absence of the mutation. The presence of a mutation altering the encoded amino acid sequence or expression of at least 1 VEGFR-3 allele in the nucleic acid correlates with an increased risk of developing a lymphatic disorder. Treatment for hereditary lymphatic disorder. Treatment for hereditary lymphatic disorder factor (VEGFR-) and vascular endothelial growth factor (VEGFP-) and vascular endothelial growth factor (VEGFP-C) and vascular endothelial growth factor (VEGFP-C) and vascular endothelial growth factor (VEGFP-C) and vascular. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 34, Requence 7, Ag

                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 1

US-08-99-811-1

Sequence 1, Application US/08999811

Sequence 1, Application US/08999811

Patent No. 5932540

APPLICANT: ROSEN, CRAIG A.

APPLICANT: ROSEN, CRAIG A.

APPLICANT: ROSEN, CRAIG A.

TITLE OF INVENTION: VASCULAR ENDOTHELIAL GROWTH FACTOR 2

TITLE OF SEQUENCES: 15

COUNTRY: MASHINGTON

STATE: DC

COUNTRY: USA

CINY: WASHINGTON

COUNTRY: USA

COMPTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

ADDION TYPE: Floppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IMP DC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/999,811

FLING DATE: HEREWITH

CLASSIFICATION NUMBER: US/08/999,811

FLING DATE: WENEWITH

FRIOR APPLICATION DATA:

APPLICATION NUMBER: US/08/550

FILING DATE: US/08/1994

PRIOR APPLICATION NUMBER: US/08/465,968

ATTORNEY/AGENT INFORMATION:

MAME: MARKONICZ, KAREN R.

REFERENCE/DOCKET NUMBER: 1488.1000004

TELEPRATION NUMBER: 36,351

REFERENCE/DOCKET NUMBER: 1488.1000004

TELEPRATION NUMBER: 36,351

REFERENCE/DOCKET NUMBER: 1488.1000004

TELEPRATION NUMBER: 12540

INFORMATION FOR SEQ ID NO: 1:

SEGUIENCE CHRACATERISTICS:

LENGTH: 1674 base pairs

TYPE: nucleic acid

STRANDENESS: double

TOWNORTHY TOWNORTS: Acid

STRANDENESS: double

TOWNORTHY TOWNORTS: Acid
